

PORTABLE BEACH LAMP

Why at the beach?

The serenity of waves hitting your feet while you and your lover walk together is the most perfect feeling in the world.

Since the beginning of time, light has been a core element of human life. It regulates the living cycle for every breathing cell on the Earth as well as impacts mental & environmental mood. Yellow light is known to evoke a sense of warmth and peace, similar to the senses evoked in the presence of your loved ones.

What are the problems?

Couples prefer having a date or taking long walks at the beach at night but the time they spend may not be up to the mark for simple reasons like improper lighting. It may be too dark for them to focus on the dinner or even keep an eye on their belongings while they get engrossed in knowing each other. Hence, lighting definitely plays a major role in a perfect date.

My goal is to design a product that is not just a normal lamp but one that connects a

Hexa's Design Language

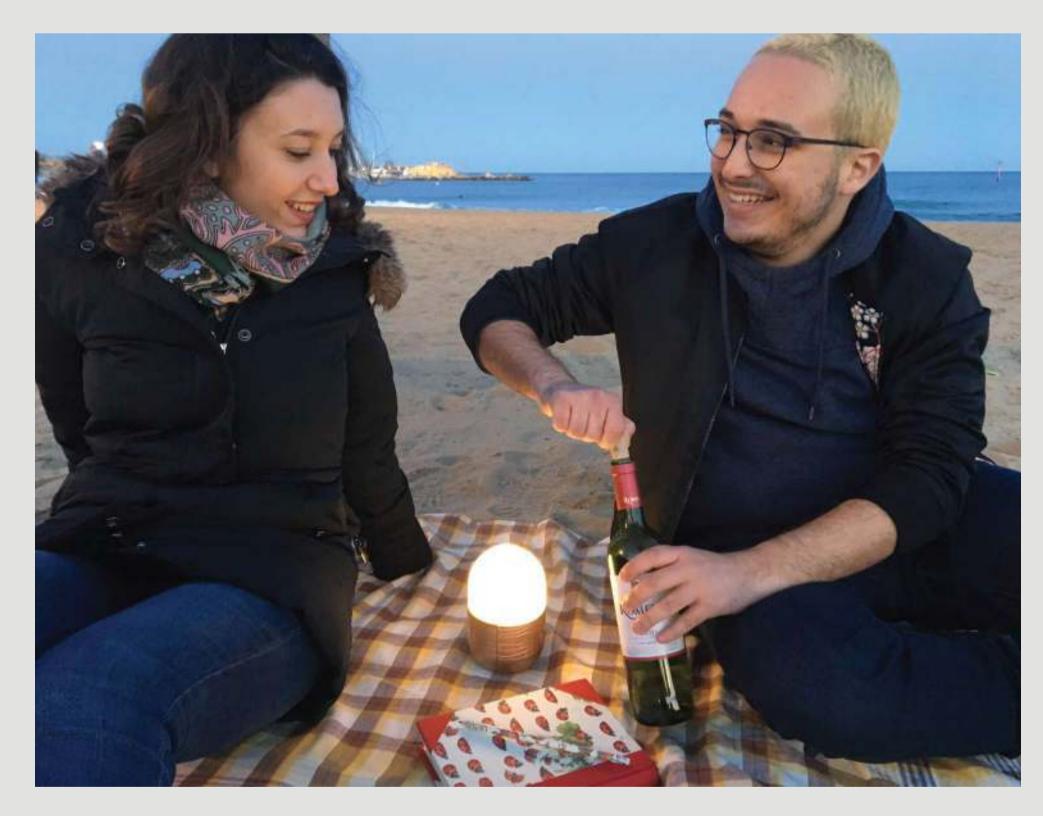

The idea is to use the analogy of two people being together. The reason for going ahead with this concept is so that a lamp can separate into two lights in two directions. It can be placed on two opposite sides, illuminating the space evenly. The other function of the lamp is to provide a stability to the beach mat by securing it through the hooks in the bottom of the lamp and holding the beach mat in place.

How to use?

Hexa is easy to use. And since its portable, it fits in your bag easily. Separate them to place in the corners of yourbeach mat by putting the corners of the mat in the loop and shove the base in the sand to secure. Switch on the lamp. Enjoy your date. If you feel like going near the sea but it's too dark, pick up your lamps and head there.
